61) Total equity is $1,620, fixed assets are $1,810, long-term debt is $650, and short-term debt is $300. What is the amount of current assets?
A) $760
B) $360
C) $1,140
D) $480
E) $790

Answer:  A
Explanation:  Current assets = $1,620 + 650 + 300 − 1,810
Current assets = $760
Difficulty: 2 Medium
Section:  2.1 The Balance Sheet
Topic:  Balance sheet
Bloom's:  Apply
AACSB:  Knowledge Application
Accessibility:  Keyboard Navigation
62) Southwest Co. has equipment with a book value of $3,560 that could be sold today for $3,900. Its inventory is valued at $1,780 and could be sold immediately to a competitor at a discount of 25 percent. The firm has $260 in cash and customers owe the firm $950, of which 98 percent is collectible. What is the current market value of the firm's assets?

A) $6,086
B) $5,536
C) $6,426
D) $6,316
E) $5,946

Answer: C
Explanation: Market value of assets = $260 + .98($950) + (1 − .25)($1,780) + $3,900
Market value of assets = $6,426

63) Martha's Enterprises spent $4,100 to purchase equipment three years ago. This equipment is currently valued at $2,700 on today's balance sheet but could actually be sold for $3,200. Net working capital is $400 and long-term debt is $2,300. Assuming the equipment is the firm's only fixed asset, what is the book value of shareholders' equity?

A) $1,300
B) $800
C) $1,600
D) $1,900
E) $2,200

Answer: B
Explanation: Book value of equity = $400 + 2,700 − 2,300
Book value of equity = $800
64) Mart's Boutique has sales of $820,000 and costs of $540,000. Interest expense is $36,000 and depreciation is $59,000. The tax rate is 21 percent. What is the net income?
A) $221,200
B) $146,150
C) $105,000
D) $179,250
E) $139,050

Answer: B
Explanation: Net income = ($820,000 − 540,000 − 59,000 − 36,000)(1 − .21)
Net income = $146,150
Difficulty: 2 Medium
Section: 2.2 The Income Statement

65) Upton Industries has revenues of $42,629, interest expense of $1,230, depreciation of $2,609, cost of goods sold of $23,704, dividends paid of $1,200, and administrative expenses of $7,040. Assume the tax rate is 22 percent. What is the addition to retained earnings?
A) $5,075.88
B) $4,630.19
C) $3,766.67
D) $4,903.18
E) $5,230.04

Answer: A
Explanation: Net income = ($42,629 − 23,704 − 7,040 − 2,609 − 1,230)(1 − .22)
Net income = $6,275.88
Addition to retained earnings = $6,275.88 − 1,200
Addition to retained earnings = $5,075.88
Difficulty: 2 Medium
Section: 2.2 The Income Statement

66) This year, Johnson Mills has annual revenue of $37,800, cost of goods sold of $23,200, and administrative expenses of $6,300. The firm paid $700 in dividends, $280 in interest, and has a total tax rate of 21 percent. The firm will add $2,810 to retained earnings. What is the depreciation expense?
A) $2,300  
B) $3,709  
C) $2,640  
D) $780  
E) $3,577  
Answer:  E  
Explanation:  Net income = $700 + 2,810  
Net income = $3,510  
Pretax income = $3,510/(1 − .21)  
Pretax income = $4,443  
Depreciation expense = $37,800 − 23,200 − 6,300 − 280 − 4,443  
Depreciation expense = $3,577  
Difficulty: 2 Medium

68) Deep Water Mining added $411 to retained earnings last year on sales of $24,646. The administrative expenses were $4,370, depreciation was $812, dividends paid were $285, and the interest expense was $103. What was the cost of goods sold if the total tax rate was 23 percent? 
A) $20,225  
B) $24,385  
C) $18,457  
D) $14,815  
E) $21,393

Answer:  C  
Explaination:  Net income = $285 + 411  
Net income = $696  
Pretax income = $696/(1 − .23)  
Pretax income = $904  
COGS = $24,646 − 4,370 − 812 − 103 − 904  
COGS = $18,457  
Difficulty: 2 Medium

69) Daniels Transport has operating income of $68,200, interest expense of $210, dividends paid of $320, depreciation of $12,400, other income of $2,100, common stock of $48,500 with a par value of $1 per share, and retained earnings of $29,700. What is the earnings per share if the tax rate is 21 percent? 
A) $1.14  
B) $1.21  
C) $.82  
D) $.96  
E) $1.33

Answer:  A  
Explaination:  Net income = ($68,200 + 2,100 − 210)(1 − .21)  
Net income = $55,371.10  
EPS = $55,371.10/($48,500/$1)  
EPS = $1.14  
Difficulty: 2 Medium

70) Given the personal income tax rates as shown, what is the average tax rate for an individual with taxable income of $118,700?

<table>
<thead>
<tr>
<th>Taxable Income</th>
<th>Tax Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 – 9,525</td>
<td>10%</td>
</tr>
<tr>
<td>9,526 – 38,700</td>
<td>12%</td>
</tr>
<tr>
<td>38,701 – 82,500</td>
<td>22%</td>
</tr>
<tr>
<td>82,501 – 157,500</td>
<td>24%</td>
</tr>
</tbody>
</table>

A) 24.00 percent  
B) 22.36 percent  
C) 19.00 percent  
D) 21.94 percent  
E) 21.00 percent

Answer: C  
Explanation:  
Tax = .10($9,525) + .12($38,700 − 9,525) + .22($82,500 − 38,700) + .24($118,700 − 82,500)  
Tax = $22,777.50  
Average tax rate = $22,777.50/$118,700  
Average tax rate = .19, or 19%

72) Assume Juno's paid $368,060 in taxes on taxable income of $1,673,000 last year. This year, the firm paid $401,545 in taxes on taxable income of $1,818,586. Assume the tax rates were the same for both years. What are the marginal and average tax rates for this year?
A) 21 percent; 21 percent
B) 22 percent; 21 percent
C) 23 percent; 22 percent
D) 22 percent; 22 percent
E) 23 percent; 21 percent

Answer: C
Explanation: Marginal tax rate = ($401,545 – 368,060)/($1,818,586 – 1,673,000)
Marginal tax rate = .23, or 23%
Average tax rate = $401,545/$1,818,586
Average tax rate = .22, or 22%

86) Right Way Movers has interest expense of $168, total revenues of $38,411, costs of $28,515, depreciation of $306, and taxes of $1,979. The beginning balance sheet has total assets of $48,354, net fixed assets of $31,202, current liabilities of $14,207, and total liabilities of $29,407. The ending balance sheet shows total assets of $49,305, net fixed assets of $33,406, current liabilities of $17,318, and total liabilities of $30,404. What is the annual cash flow of the firm?
A) $9,771
B) −$2,160
C) $15,168
D) $8,474
E) $2,857

Answer:  A
Explanation:  OCF = $38,411 − 28,515 − $1,979
OCF = $7,917
Net capital spending = $33,406 − $31,202 + $306
Net capital spending = $2,510
ΔNWC = ($49,305 − $33,406 − $17,318) − ($48,354 − $31,202 − $14,207)
ΔNWC = −$4,364
CF(A) = $7,917 − 2,510 − (−$4,364)
CF(A) = $9,771

90) For the year, Jensen's has depreciation of $2,058, dividends paid of $125, interest expense of $382, an addition to retained earnings of $3,408, and an increase in common stock of $2,500. The total tax rate is 21 percent. What is the operating cash flow?
A) $6,460
B) $5,973
C) $5,325
D) $5,735
E) $6,408

Answer:  B
Explanation:  Net income = $125 + 3,408
Net income = $3,533
Pre-tax income = $3,533/(1 − .21)
Pre-tax income = $4,472.15
EBIT = $4,472.15 + 382
EBIT = $4,854.15
OCF = $4,854.15 + 2,058 − ($4,472.15 − 3,533)
OCF = $5,973

What is the cash flow of the firm for the current year if the tax rate is 22 percent?

A) $1,885  
B) $1,042  
C) $2,297  
D) $2,096  
E) $2,517

Answer: D

Explanation:  
Pretax income = $48,915 − 29,715 − 12,106 − 1,408 − 816  
Pretax income = $4,870  
Tax = .22($4,870)  
Tax = $1,071  
OCF = $48,915 − 29,715 − 12,106 − 1,071  
OCF = $6,023  
Net capital spending = $32,711 − 31,984 + 1,408  
Net capital spending = $2,135  
Change in NWC = ($16,506 − 14,652) − ($14,687 − 14,625)  
Change in NWC = $1,792  
Cash flow of the firm = $6,023 − 2,135 − 1,792  
Cash flow of the firm = $2,096

92) For a given year, Rogers Express paid $318 in interest, $460 in dividends, and $368 in taxes. The firm had a net income of $1,220, depreciation of $1,560, an increase in net working capital of $220, an increase in net fixed assets of $950, and a decrease in long-term debt of $260. There were no changes in the equity accounts other than the change in retained earnings. What is the annual cash flow of the firm?
A) $3,148
B) $1,610
C) $2,780
D) $1,038
E) $50

Answer: D
Explanation: \( CF(B) = 318 + 260 \)
\( CF(B) = 578 \)
\( CF(S) = 460 \)
\( CF(A) = 578 + 460 \)
\( CF(A) = 1,038 \)

93) JK Meadows has beginning current liabilities of $14,602 and total liabilities of $35,418. At the end of the year, the current liabilities are $15,311 and the total liabilities are $37,604. During the year, the firm paid $680 in dividends and $1,320 in interest. What is the cash flow to creditors?
A) $3,230
B) $2,797
C) $3,135
D) −$157
E) −$267

Answer: D
Explanation: \( CFC = 1,320 - [(37,604 - 15,311) - (35,418 - 14,602)] \)
\( CFC = -157 \)

94) During the year, Lasko's repaid $12,500 in long-term debt, borrowed $8,400, paid $611 in interest and $740 in dividends, and had an operating cash flow of $16,207. The firm acquired $33,500 in new fixed assets and sold $8,400 of old assets. Net working capital declined by $1,592 during the year. What is the annual cash flow to stockholders?

A) $1,200
B) −$2,590
C) −$8,828
D) −$12,012
E) $2,800

Answer: D

Explanation: Cash flow of the firm = $16,207 − 33,500 + 8,400 − ($−1,592)
Cash flow of the firm = −$7,301
CFC = $611 + 12,500 − 8,400
CFC = $4,711
CFS = −$7,301 − 4,711
CFS = −$12,012

95) Last year, Webster Farms had annual revenue of $87,200, depreciation of $11,600, cost of goods sold of $54,700, and administrative expenses of $8,300. The firm paid $3,200 in dividends and paid taxes of $2,646. What was the operating cash flow?

A) $21,500
B) $18,300
C) $23,100
D) $21,554
E) $23,700

Answer: D

Explanation: OCF = $87,200 − 54,700 − 8,300 − 2,646
OCF = $21,554
Difficulty: 2 Medium

96) Last year, Oscar's Dog Treats had a cash flow to creditors of $2,840 and a cash flow to stockholders of $1,630. The firm spent a net of $1,420 on fixed assets and reduced net working capital by $330. What was the operating cash flow?
A) $6,190  
B) $5,560  
C) $3,500  
D) $1,320  
E) $4,901

Answer:  B  
Explanation:  CF(A) = $2,840 + 1,630  
CF(A)= $4,470  
$4,470 = OCF − $1,420 − (−$330)  
OCF = $5,560

97) Quick Marts increased its cash by $418 this year. The firm's statement of cash flows shows total cash flow from financing activities of $246 and total cash flow from investing activities of −$184. What is the total cash flow from operations on this accounting statement?
A) $480  
B) $356  
C) $427  
D) $367  
E) $391

Answer:  B  
Explanation:  $418 = Total cash flow from operations − 184 + 246  
Total cash flow from operations = $356

98) JJ's has net sales of $48,920, depreciation of $711, cost of goods sold of $31,890, administrative costs of $11,210, interest expense of $680, dividends paid of $450, and taxes of $974. What is the cash flow from operations as it will appear on the accounting statement of cash flows if the firm spent $274 on net working capital?

A) $3,892  
B) $3,056  
C) $4,066  
D) $3,667  
E) $3,391

Answer: A  
Explanation: Cash flow from operations = $48,920 − 31,890 − 11,210 − 680 − 974 − 274  
Cash flow from operations = $3,892  
Note that the accounting statement of cash flows includes the interest expense as an operating activity.

99) Define liquidity and explain what a firm would need to do to ensure all of the current assets displayed on its balance sheet are liquid.

Answer: Liquid assets are those that can be sold quickly with little or no loss in value. To ensure the current assets are liquid, the firm needs to review its accounts receivable to ensure the accounts are collectible and also review its inventory to ensure it can be sold for at least its recorded book value.

100) Discuss the difference between book values and market values on the balance sheet and explain the best method for determining the value of a firm to its stockholders.

Answer: The accounts on the balance sheet are generally carried at historical cost, not market values. Although the book value of current assets and current liabilities may closely approximate market values, the same cannot be said for the rest of the balance sheet accounts. Ultimately, stockholders should focus on the firm's stock price, which is a market value measure, for the value of their investment in the firm.

101) Note that in all of our computations to determine the cash flows of a firm, we never include the addition to retained earnings. Why not? Is this an oversight?

Answer: The addition to retained earnings is not a cash flow; it is simply an accounting entry that links the income statement to the balance sheet and shows that the earnings of the firm accrue to stockholders.

Difficulty: 2 Medium

102) From a financial perspective, why is interest expense excluded from the operating cash flow?

Answer: Operating cash flow is designed to represent the cash flow a firm generates from its day-to-day operations. Interest expense arises from a financing decision and thus is considered in finance as a cash flow to creditors.

Difficulty: 2 Medium
Section: 2.5 Cash Flow of the Firm
Topic: Operating cash flow
Bloom's: Apply
AACSB: Knowledge Application

103) Explain why the income statement is not a good representation of cash flow.

Answer: Most income statements contain some noncash items, such as depreciation, which reduce net income but do not affect the cash flows. More importantly, however, income statements are prepared using GAAP guidelines which record revenues and expenses as sales are completed, not when their corresponding cash flows occur.

Difficulty: 2 Medium
Section: 2.5 Cash Flow of the Firm
Topic: Cash flows
Bloom's: Analyze
AACSB: Analytical Thinking
Accessibility: Keyboard Navigation

104) Depreciation is classified as a noncash item because no cash is spent when depreciation is recorded. Why are expenses that have been accrued, but not yet paid, not also considered to be noncash items and therefore excluded from operating cash flow just as depreciation is excluded?

Answer: Accrued expenses will appear in accounts payable and affect the change in net working capital. Via the change in net working capital, these unpaid expenses are subtracted from the operating cash flow to determine the cash flow of the firm. This method allows for the computation of the cash flows based solely on financial statement information which is generally easy to obtain. Depreciation, on the other hand, is the expensing of a fixed asset cost that was paid for when the asset was acquired.

Difficulty: 2 Medium

105) Interpret, in words, what the cash flow of the firm represents by discussing operating cash flow, changes in net working capital, and additions to fixed assets.

Answer: Operating cash flow is the cash flow a firm generates from its day-to-day operations. In other words, it is the cash flow generated as a result of putting the firm's assets to work. Changes in net working capital and fixed assets represent investments a firm needs for its operations. That is, a firm typically takes some of the cash flow it generates from using assets and reinvests it in new assets. Cash flow of the firm, then, is the cash flow a firm generates by employing its assets, net of any asset acquisitions.

Difficulty: 2 Medium
Section: 2.5 Cash Flow of the Firm
Topic: Cash flow from assets
Bloom's: Analyze
AACSB: Analytical Thinking
Accessibility: Keyboard Navigation
106) Why is cash flow management important?

Answer: Generally Accepted Accounting Principles (GAAP) allow significant subjective decisions to be made in many key areas. The use of cash flow as a metric to evaluate a company comes from the idea that there is less subjectivity involved and therefore, it is harder to spin the numbers.
